

AMENDMENT AFTER FINAL OFFICE ACTION  
SERIAL NO. 10/032,355  
Page: 2

## Amendments to the Specification

Please replace paragraph [010] with the following amended paragraph:

[010] The current location of a wireless communication device, derived from ALI techniques, is provided in response to a 911 call initiated by a wireless device. Unfortunately, no mechanisms are in place for providing the current location of a wireless device to the general public when the wireless device is initiating anything other than a 911 call or not participating in a call of any kind. There may be no mechanisms in place because of the problems of logistics, i.e. making the information readily accessible by authorized individuals, and security, i.e. implementing safeguards to secure sensitive personal information from unauthorized individuals. In addition, there may be no mechanisms in place because of problems associated with interpretability, i.e. providing the current location information in a format that is readily interpreted by the authorized individual, and affordability.

Please replace paragraph [060] with the following amended paragraph:

[060] Following task 98 after a single iteration of process 36 to provide indicator 106 of current location 35, or following a number of iterations of tasks 92, 94, ~~86, and 98~~, 96, and 98, current location provision process 36 exits having provided to a requester the map 102 (FIG. 7) that is readily interpreted to determine current location 35 of wireless communication device 24 (FIG. 1).
